

VERIDIAN — INTERNAL RENEWAL BRIEF

CONFIDENTIAL — NOT FOR DISTRIBUTION

DRAFT — Pending SM review

ACCOUNT SNAPSHOT — BLUEFRAME HEALTH	
Account ID	VRD-00388
CSM	Jordan Kim
Segment	Enterprise — Healthcare
ARR	\$319,000
Contract End	June 1, 2026
Days to Renewal (as of Feb 3)	118 days
Licensed Seats	38
Current Seat Utilization	44% (approx) — see note *
Health Score	61 (Red)
NPS (Oct 2025)	7.25 avg — 2 Passives, 2 Promoters
Economic Buyer	Taiwo Okonkwo, VP Operations
Day-to-Day Champion	Kofi Oyelaran, Director Clinical Analytics
Renewal Target	Flat renewal at \$319K (no expansion)

* Seat utilization figure is approximate. Usage export from Jan 26 shows 39.5% (15/38 active); this brief uses 44% based on an earlier pull from Nov 17. **[Jordan — which number is right here? The CSV I have shows 39.5 for the most recent week but you have 44 in the brief — SM]**

01 EXECUTIVE SUMMARY

Blueframe Health is approaching renewal with significant risk indicators that are not reflected in the account's surface-level relationship health. The account has no open support tickets, no escalations on file, and a CSM-reported status of stable through Q4. However, product usage data tells a materially different story: seat utilization has dropped significantly over the past 22 weeks, and the cohort analysis module — the primary use case cited at contract signing — has seen near-zero activity since November 2025.

The account is quiet. The risk is that the silence is being read as satisfaction.

02 USAGE TRENDS

Metric	August 2025 (baseline)	Feb 2026 (current)*
Seat utilization	89%	39–44% (see note)

Weekly sessions	~300/week	~88/week (↓ 71%)
Cohort module sessions	~40/week	2–3/week (↓ 94%)
Support tickets (6mo)	4	0

03 ROOT CAUSE HYPOTHESIS

The primary hypothesis is incomplete onboarding of the cohort analysis module. Review of onboarding records indicates the cohort module session was formally closed without validation — Rosa Flores (the designated power user) self-onboarded and this was never verified at the 90-day check-in. The 90-day call with Kofi did not include a feature-level usage review.

A secondary hypothesis from NPS verbatim: Taiwo Okonkwo (VP Operations, economic buyer) indicated in October 2025 that the team is “evaluating our tool stack more broadly this quarter.” This phrase was not flagged in the original NPS review. This may be the more urgent signal.

04 RECOMMENDED ACTIONS

- Schedule an executive check-in with Taiwo Okonkwo before April. Do not let renewal approach without exec-level contact.
- Re-open onboarding for the cohort module with Rosa Flores. Frame as a “Veridian 2.0” session — proactive, not remedial.
- Do not lead renewal conversation with pricing. Lead with value realization gap.
- If tool stack evaluation is confirmed, request a meeting to understand scope. Position Snowflake connector (live) as a differentiator.

Q1 Action Items

[TBD — confirm with Kofi re: best timing for exec intro. Also need to check whether Taiwo Okonkwo is still the right contact or if someone else owns budget decisions now — JK]

05 RENEWAL RISK RATING

MEDIUM-HIGH. The account is not lost. But the silence is not health. Requires proactive intervention in the next 30 days to prevent an informed non-renewal in June.
